

Puzzle 1

General Setup

All pages for all puzzles must be printed. It is important that the pages for puzzle 4 are printed in colour (and relatively high resolution, if possible).

The Cassette pages for puzzle 4 should be cut into quarters (A6 size).

The answer sheet should be cut along the lines to create smaller individual answer sheets.

The Messages pages should be cut out to form smaller individual message slips.

The Pages for each puzzle can then be matched with the answer slips for ease of distribution. The message slips can also be arranged with these stacks **BUT** each message is given after the puzzle is solved, when the next puzzle is given.

Setup

Fold all pages for Puzzle 1 into thirds, with the area with the stamp and address on the upper most fold facing outward.

This is easiest done by rolling the paper into a tube, where the bottom edge is rolled up to the top crease and the top edge reaches the bottom fold.

The now completed envelopes can be randomly shuffled and presented to the players.

Additionally, the answer card no.1 for Puzzle should be given to the players.

The introduction and the Rules can then be read to the players.

Solution

The envelopes all contain clues as to how they were created, either by a human, or an AI system.

Clues indicating the use of AI include:

- The use of Emoji
- The use of Endashes "—"
- The use of Arrows "->"
- AI generated footers asking for revisions
- AI generated Stamps
- Incorrect Data visualisations
- Corrupted printing from repeated scanning
- Clues indicating a human origin:
- The use of a typewriter
- Spelling mistakes
- Correct data representation
- Fingerprints

Once every letter has been determined to be Human made or AI generated only one Human letter should remain, the letter sent by Omega404.

The final step is to write the fax number from the letter onto the answer card.

Puzzle 2

Set up

The printed sheet for puzzle 2 can be cut in half (A5), but this is optional. This is the Frequency ruler.

The Message slip No. 1 should be given to the players with the Frequency ruler.

Finally, answer card no.2 should be given to the players.

Solution

Folding the Frequency ruler along the dashed lines allows the ruler to be used correctly.

The ruler can be folded so that 250Hz is the top most row, the higher frequencies being folded behind.

Then the ruler can be aligned to the plotted Data. At the second amplitude all of the plotted data will align with the points on the frequency ruler.

This shows that the correct amplitude is 2 and the frequency is 250Hz.

These two values can then be written on the answer card.

Puzzle 3

Setup

The players can be presented with the map and the key for which stations reach which towns.

Players should then also be given the answer card no.3, Message slip no.2.

Solution

Players alternate between narrowing down town names based on radio station overlap and narrowing down radio station locations by matching the cities within the ranges.

The first clues to observe are the number of towns within a station's range, and the number of stations broadcasting to a given town.

The final result is that the station broadcasting to Bacharet is Northouse Radio.

This can then be written on the answer card.

Puzzle 4

Set up

The cassette player should be cut out. The window at the front being the most important. Then a red translucent plastic film can be taped or glued to the inside, so that it fills the window.

Secondly the Cassettes should be cut out and shuffled. It is important these are printed at a relatively high quality and in colour.

Finally the players can be given all the Cassettes and the player, along with answer card no.4, Message slip no.3 and the word cloud sheet.

Solution

Reading the message players should be clued into the fact they need to find a message within the most popular songs.

The popularity is represented by scale in the word cloud, the 4 most popular in order being:

1. High
2. Winter
3. Soul
4. Lost

Placing these cassettes into the player reveals hidden words in various places on the cassette. These words form the phrase:

Out of sight, in darkest night.

This phrase can then be written on the answer card, which has spaces that align with the message.

Puzzle 5

Set up

Present the players the pages for puzzle 5, which should be a collection of four maps: a heatmap of light pollution; a cartogram of camera presence; a road network, and a matching road map.

Additionally, the answer card no.5 for Puzzle should be given to the players along with the message slip no. 4

Solution

Interpreting the phrase provided by the previous puzzle, (additionally mentioned in the message slip no.4), as a location with minimal light pollution and minimal camera coverage the players can narrow down the cities.

Once the singular city which is both dark blue (low light pollution) and shrunk relative to its true size (relatively low camera presence) has been identified the players can find it on the road and City node maps.

This is done by following back from one of the known locations (Limnee or Bacharet) along the large roads on the road map, comparing cities arrived at in this way and their connections to the Node map representation.

The final solution the players arrive at should be "San Key".

Puzzle 6

Setup

The message slip (no. 5) and answer sheet (no.6) can be presented to the players. The final message slip (no.6) will be handed over after they finished puzzle 6.

Solution

Referring to all previous puzzles the final answer sheet can be filled in. The resulting address should be:

Highwinter Soullost

250/2

Northouse Str.

San Key

((First four digits of Fax))

It is advised to prepare all puzzles before the start of the game.

First print out the following:

- Letters.pdf (Double sided)
- FrequencyRuler.pdf
- RadioReceptionList.pdf, RadioSignalCoverageMap.pdf
- WordCloud.pdf, Cassettel.png, Cassette2.png, Cassette3.png, Cassette4.png
- Heatmap.pdf, Nodemap.pdf, Roadmap.pdf, Scalemap.pdf
- Address.pdf

Puzzle 1

Set aside all six pages of Letters.pdf for the first puzzle.

Fold all pages for Puzzle 1 into thirds, with the area with the stamp and address on the upper most fold facing outward.

This is easiest done by rolling the paper into a tube, where the bottom edge is rolled up to the top crease and the top edge reaches the bottom fold.

Puzzle 2

Set aside FrequencyRuler.pdf for the second puzzle.

Optionally, the printed sheet for puzzle 2 can be cut in half (A5).

Puzzle 3

Set aside RadioReceptionList.pdf and RadioSignalCoverageMap.pdf for the third puzzle.

Puzzle 4

Set aside WordCloud.pdf for the fourth puzzle.

Cut Cassettel.png, Cassette2.png, Cassette3.png and Cassette4.png into quarters (A6) and set these aside.

Puzzle 5

Set aside Heatmap.pdf, Nodemap.pdf, Roadmap.pdf and Scalemap.pdf for the fifth puzzle.

Puzzle 6

Set aside Address.pdf for the fifth puzzle.
